

## Roller Dressers

These dressers are as good as multi diamond tool in which row of diamonds are fitted into the circumference of roller bodies at a regular distance apart. After one row of diamonds become flat/worn, by turning the roller further new tips are used for dressing, thus ensuring clean equal dressing. A special process is used to select the Needle diamonds & Natural diamonds for these type of roller dressers. Relatively small diamonds are used. These roller dressers are sufficient to cover the whole range of wheel dressing operation.

### To get the maximum tool life

- ☞ Use plenty of coolant to increase the tool life
- ☞ Depth of cut should not exceed more than 0.01 to 0.03 mm
